How to install SignagePlayer on ChromeOS

Follow the steps below to install SignagePlayer on ChromeOS devices. For the installation/managment we to some extent use Google's Enterprise Enrollment. To enroll/install a device it can't already be in use. If so, it first needs to be factory reset. (Factory reset=Sign out, press and hold Ctrl+Alt+Shift+R, restart/Powerwash.)

1. If asked, confirm current location and language. Click Get started...

2. Connect the device to a network.

3. The device will check that it is updated.

4. Select Device Enrollment (or work if not Device Enrollment is shown). (You may as well press Crtl + Alt + E)

6. The device confirms the enrollment was ok, and then the SignagePlayer should be installed and launched automatically. Use the "secret" number shown on screen to pair it in SignagePlayer.

Done!
