Step 7: Type in the correct url: https://dms.visualart.se/tizen/sp3 Important!! Case sensitive = lowercase. Be aware of whitespace before or after the URL.

Step 8: Only newer screens, No need to configure, press Skip.

Step 9: Set the correct date and time. (Must not be a future date/time)

Step 10: Setup Complete, press Enter.

Go back to main screen by pressing F5 on the keyboard or Home on remote. Chose **URL Launcher or Custom App**

Wait for the software to say: "Connected to Server" on the screen.

VAPlayer is downloading and starting.

Troubleshoot

Q: VAPlayer is not downloading

A:

First, check that the screen is connected to a working network. Second, doublecheck the URL. It must be all lowercase letters and no whitespaces. Third, Check that the time is correct. If the time is not set correctly the SSL Certificate fails.
